1. INTRODUCTION

This document presents an analysis of the UNI Student Climate Survey given to students participating in advanced registration for the Spring 2001 Semester (November 10 – December 3, 2000). A total of 9,775 students completed the survey. Each student was asked to answer one of 27 randomly selected statements prior to registering. On average, about 362 students responded to each item. Items used in the survey focused on student perceptions of the social and educational environment at UNI and are the same questions used on the survey last year.

2. METHODOLOGY

A master file containing student demographic data as well as responses to the survey was provided to the Office of Information Management & Analysis (IM&A) by the Office of Information Technology Services (ITS). The data were then analyzed to show patterns of response by college. Demographic information includes gender, age, marital status and residency. Table 1 provides a summary of demographic characteristics of the students responding to the survey.
